

# The size and shape of a vinyl-lined pool is limited only by your imagination

**Find out why the pool material of choice in the United States is becoming increasingly popular here in Australia!**

- Vinyl pools are generally less expensive than concrete pools and the technology behind them has increased significantly in recent years. They are structurally very strong and the liner material is now much thicker and tougher, leaving you with a very attractive, non-abrasive and easy to maintain finish.
- Vinyl-lined pools will not chip, crack or flake – it is the thickest and toughest flexible pool finish available, with a non-abrasive finish, embossed to ensure a non slip surface.
- The vinyl used to create your pool liner is treated to resist algae, bacteria and fungal growth, which keeps your pool healthy! Your vinyl liner will never get black spot and requires less chemicals to keep your pool clean. No flakes of paint or glass in your water!
- Due to the flexible nature of the material, each pool is custom shaped and created to perfectly suit your space. Your pool is solid, being constructed of brick and concrete and will last a very long time. Your pool can be easily renovated using our vinyl system.
- Developed in Australia for the Australian climate, your pool will withstand the elements while avergaing 2-3 degrees warmer than concrete pools.
- The vinyl is created with special UV filters to resist fading and sun damage. When manufactured, installed and maintained correctly, your pool liner can last 15 years or more.
